

Joseph
Greenwood

Joseph Greenwood

Product Design Lead at Endava with 7 years experience building enterprise and consumer products. With a background in brand identity design, I bring a strong foundation in visual craft and strategic thinking to complex product environments.

I lead the design process end-to-end; from presales and discovery through to delivery and launch, partnering closely with clients, product leaders, and engineering teams to shape clear, scalable solutions.

Education

Northumbria University

Bachelor’s Degree, Graphic Design
2016 - 2019

Core Capabilities

- ✔ Product Design & Strategy
- ✔ UX Design, Research, & Testing
- ✔ Design Systems & Component Libraries
- ✔ AI-Assisted Prototyping & Product Building
- ✔ Art Direction & Brand Identity Design
- ✔ Product Design Leadership from Concept to Launch
- ✔ Intermediate Frontend Knowledge

Work Experience

Endava

Product Design Lead
2021 - Present

Toyota Racing Division
Product Design Lead

Relias
Product Design Lead

Rocket
Senior Product Designer

Grameen America
UI & Visual Design Lead

Medbridge
Product Designer

Boost Payment Solutions
UI & Visual Designer

Brand Identity Designer

Freelance
2020 - 2021

H&A Marketing

Visual & Product Designer
2019 - 2020

Awards

Product Design Lead

Enterprise UX

● Current Project

Toyota Racing Development

Business Need

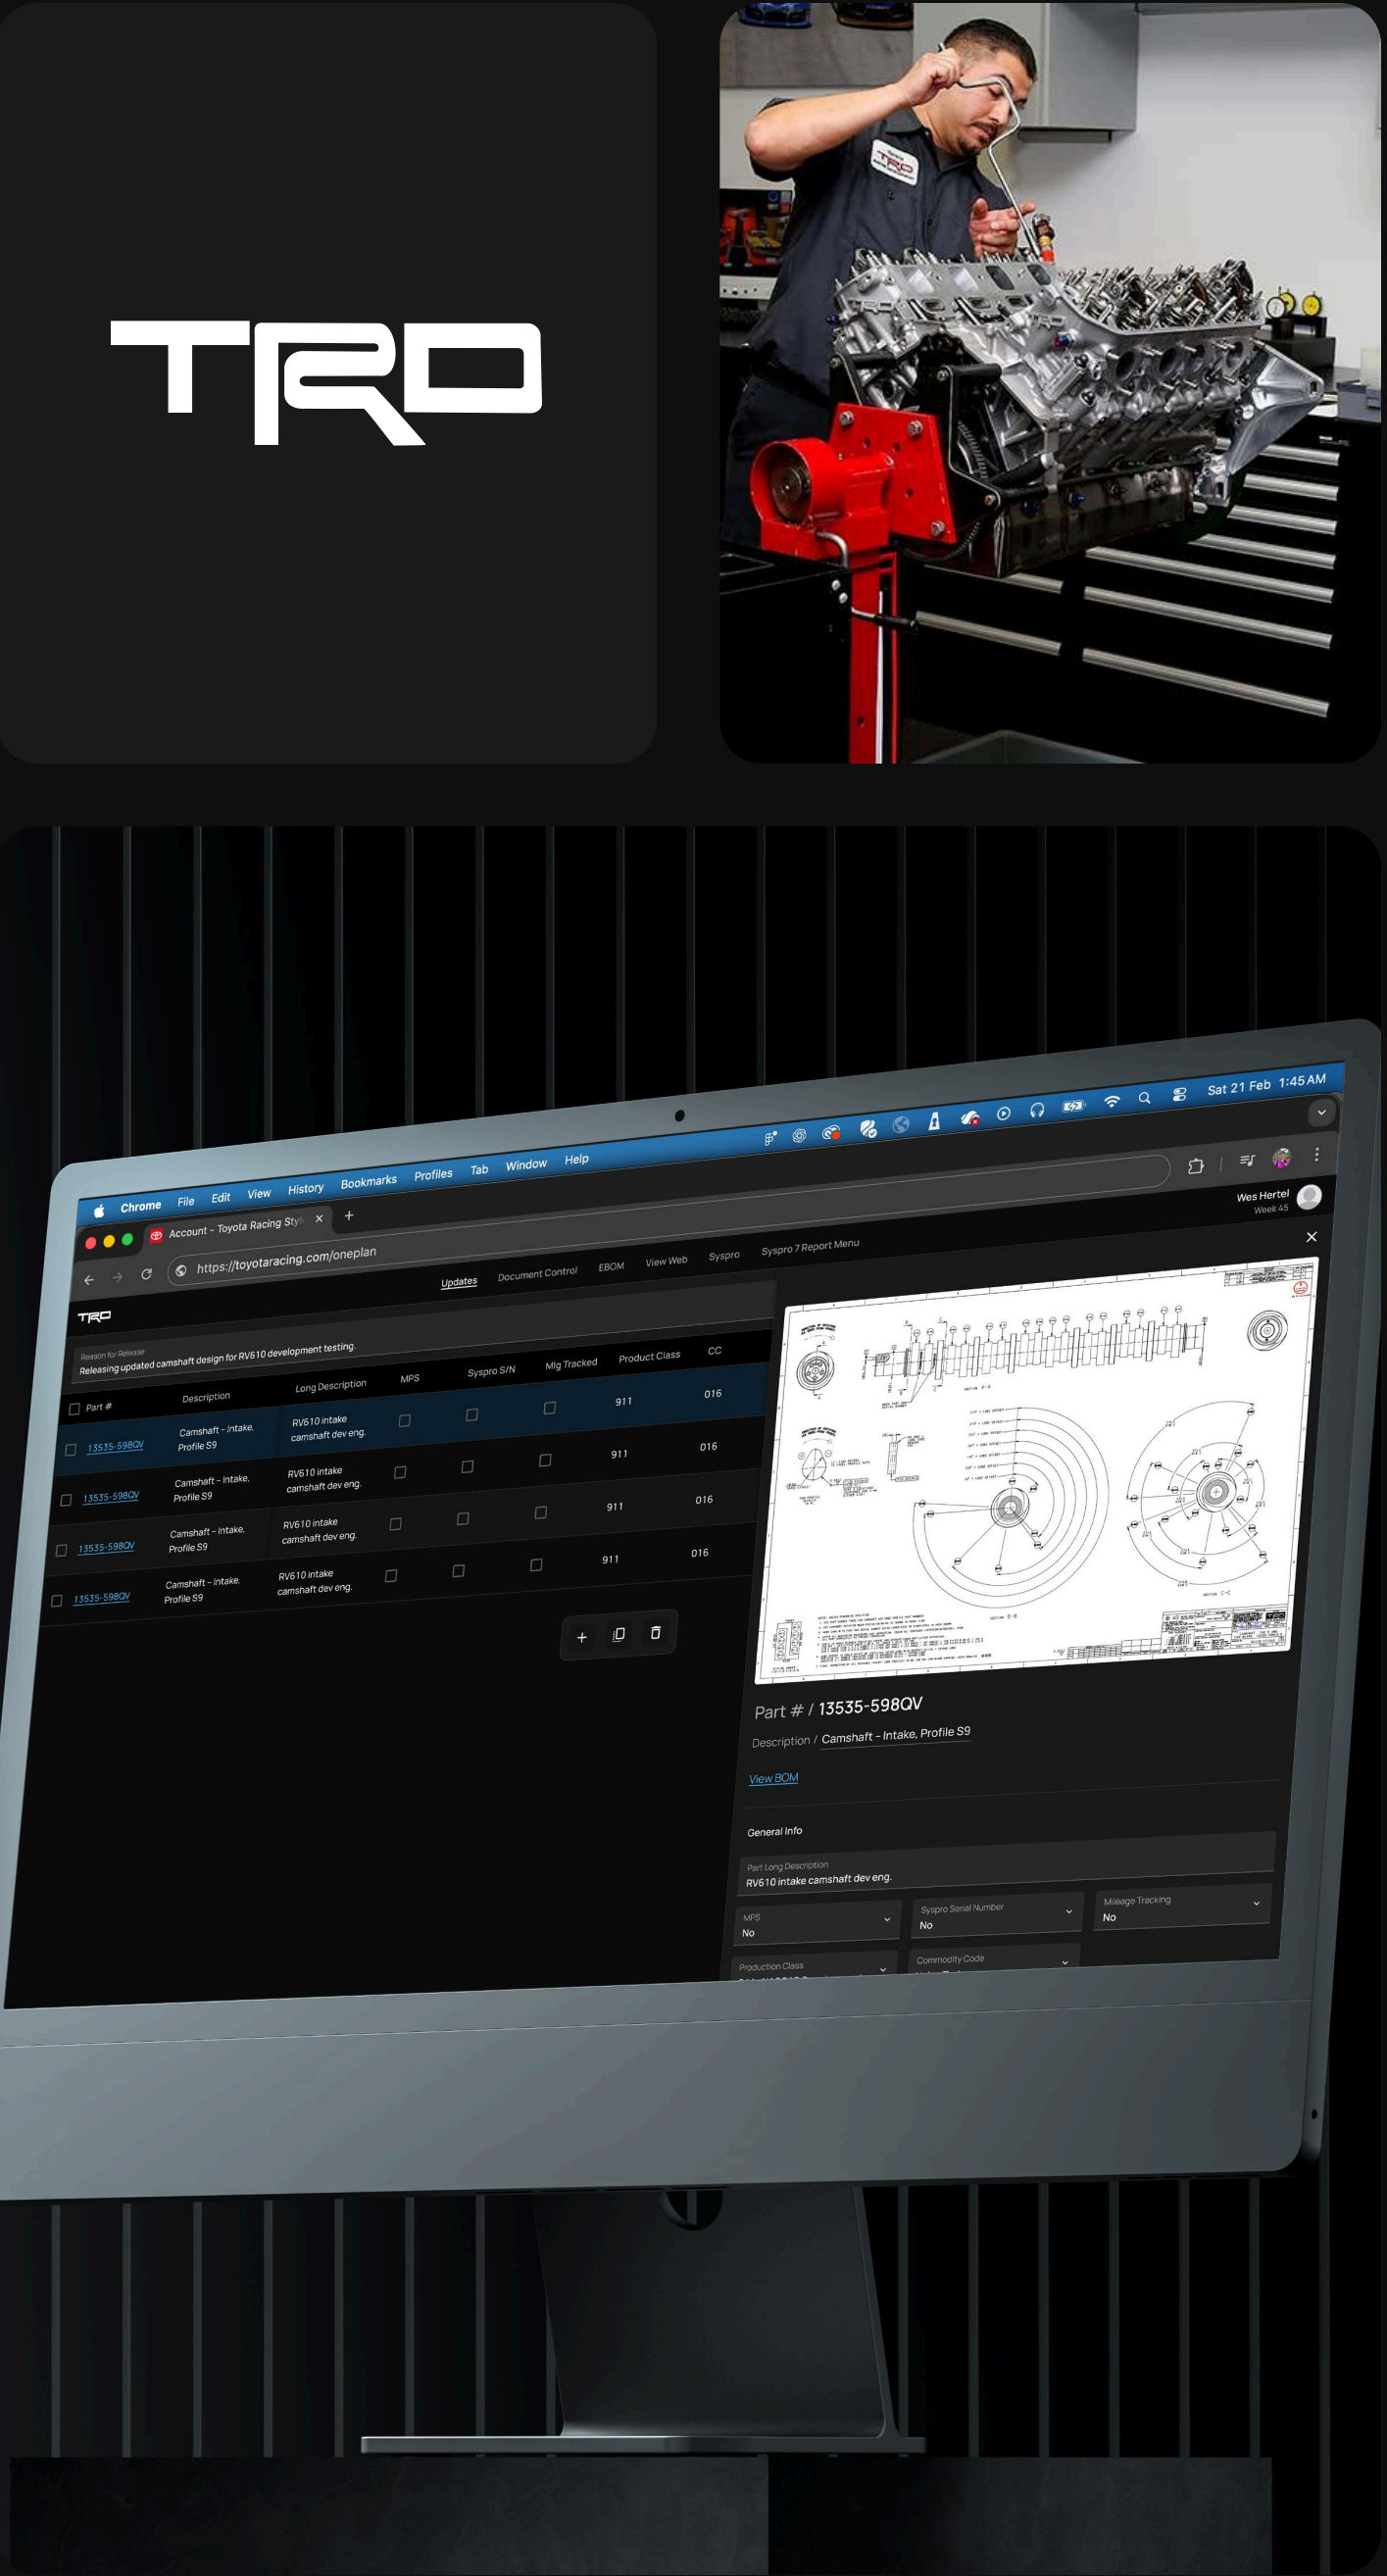

TRD operates in a fast-paced racing environment where engineering, planning, manufacturing, quality, and build teams must work in close coordination to deliver competitive engines on strict timelines. Over time, systems and processes have evolved in ways that create fragmented workflows, manual handoffs, and reliance on individual knowledge. While performance remains strong, this complexity increases risk, slows decision-making, and limits cross-team visibility. To support faster innovation and more predictable execution, TRD needs a modern, integrated digital foundation that simplifies processes, improves transparency, and enables teams to move from concept to race with greater speed and confidence.

Projected Impact

- Reduce change cycle time by identifying downstream impacts earlier.
- Lower operational risk by minimizing late-stage rework and disruptions.
- Increase efficiency by reducing manual coordination and approval bottlenecks.
- Enable scalable growth through a modern, extensible digital foundation.

Projected Deliverables

This engagement will deliver a clear assessment of TRD’s current workflows and system dependencies, along with a defined future-state vision that simplifies processes and improves cross-team visibility. Outputs will include documented data flows, key pain points, and a prioritised modernisation roadmap. The project will also establish a scalable design system and cohesive visual language to ensure consistency and usability across modules. Ultimately, the work will culminate in a fully redesigned, modernised platform experience that enables faster decisions, reduced manual effort, and long-term scalability.

Product Design Lead

Enterprise UX

Reimagining Content Creation at Scale

Business Need

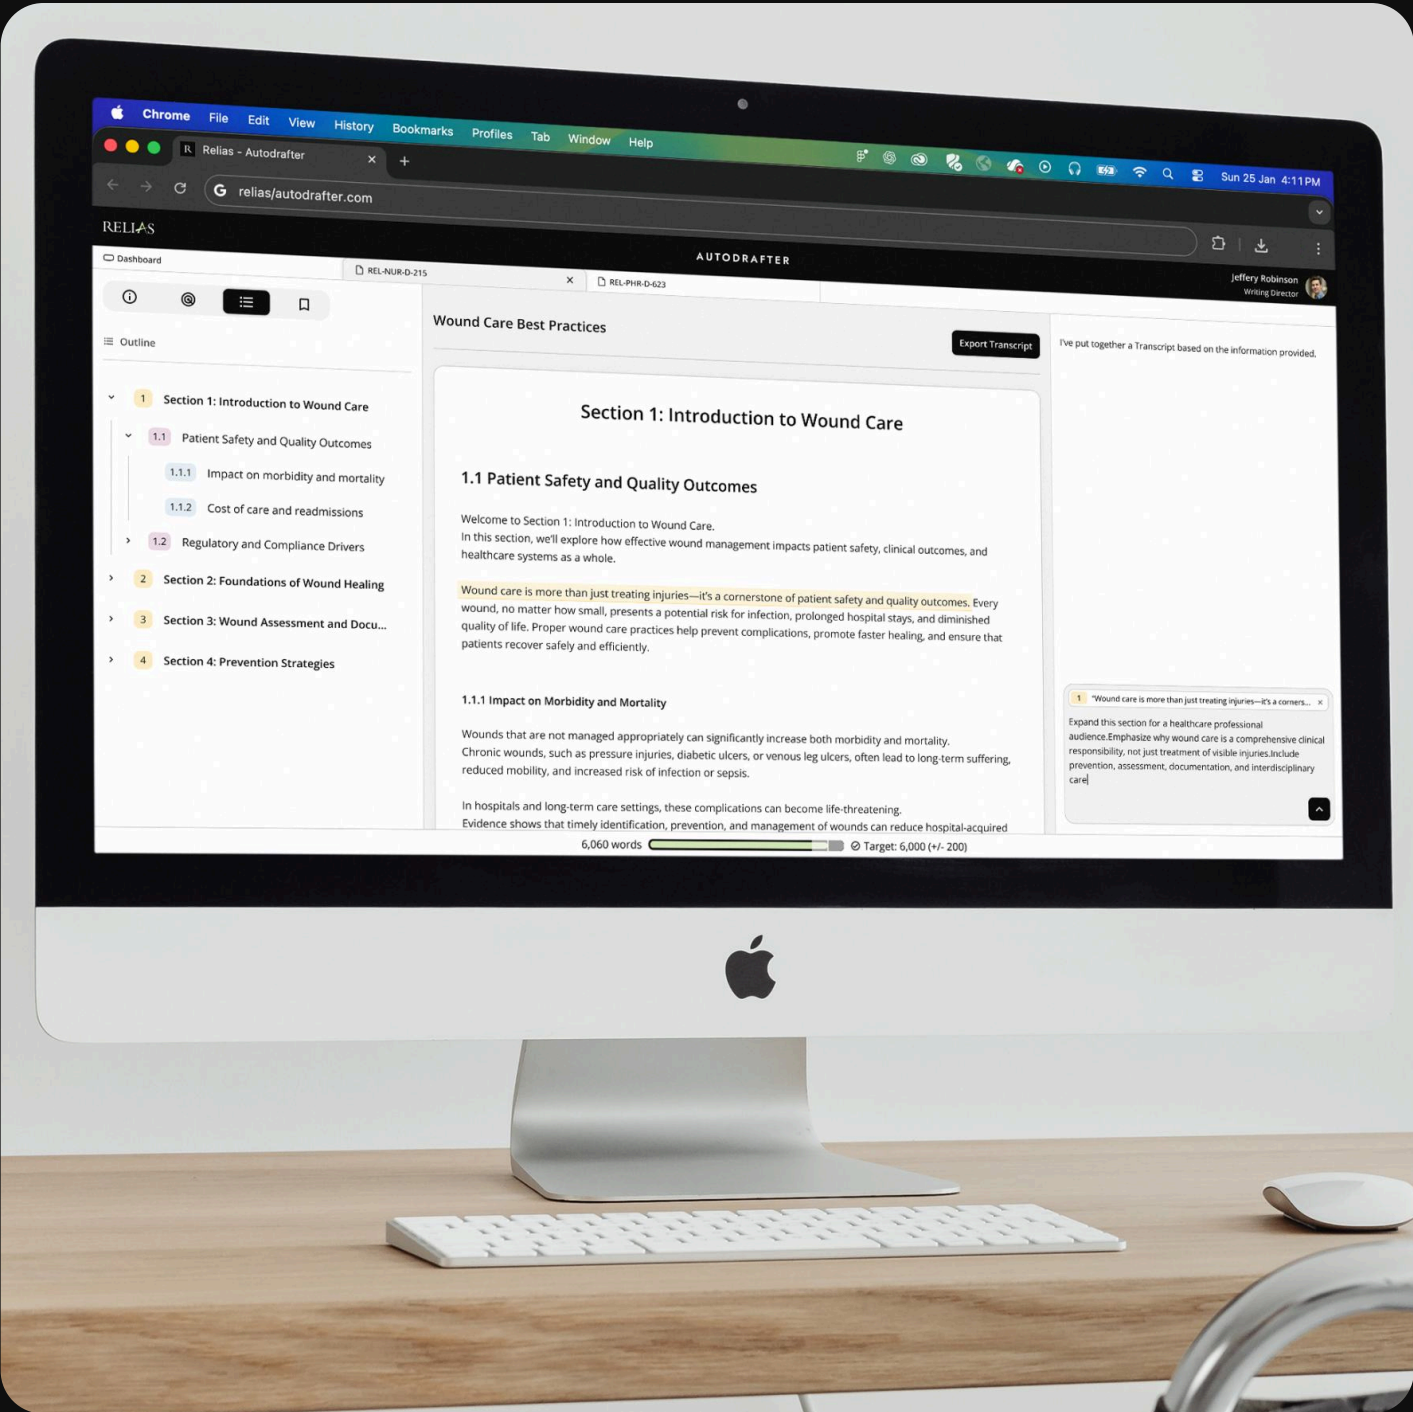

Relias sought a scalable, future-ready approach to content creation to lead innovation in healthcare education and leverage emerging technologies effectively. As demand for content accelerated, the existing workflow required reimagination; reducing manual effort, clarifying ownership, improving traceability, and enabling faster production while maintaining compliance, quality, and brand consistency at scale.

Deliverables

Helped conduct an end-to-end discovery, including user and stakeholder interviews and workflow mapping, to identify pain points across writing, review, QA, and compliance. Designed and validated an AI-powered solution through iterative prototyping, shifting workflows from manual drafting to AI-assisted generation and validation. Led design through build, delivering production-ready prototypes, a scalable design system, and a smooth developer handoff.

Impact

- Reduced transcript creation time by shifting from manual drafting to AI-first generation and validation
- Accelerated time to market for new educational content
- Identified and defined multiple AI integration points across writing, QA, and compliance processes
- Delivered a scalable design system for rapid iteration and growth

I've put together LOs based on the information provided.

Consumer UX

Designing for Scale, Speed, and Consistency

Business Need

The client needed to unify a fragmented digital platform to improve usability, scalability, and brand consistency. Inconsistent UI patterns, the absence of a component-based system, and growing CMS demands were slowing delivery and creating friction for both users and internal teams. A more scalable, user-centered foundation was required to support faster iteration, reduce errors, and enable consistent experiences across web, mobile, and marketing touchpoints.

Deliverables

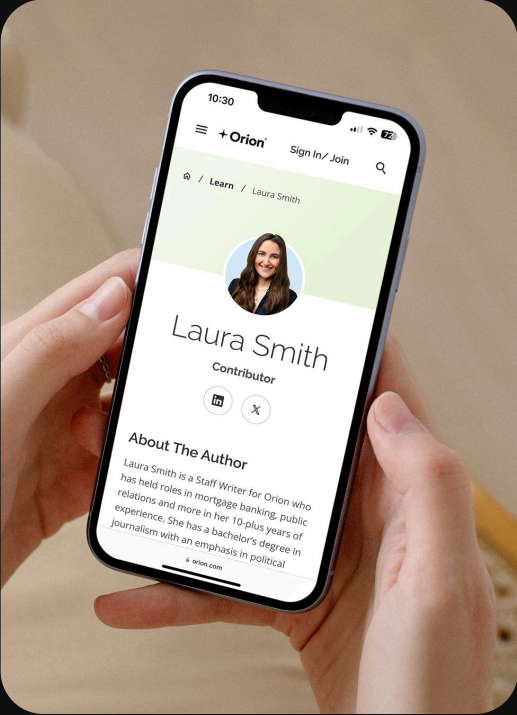

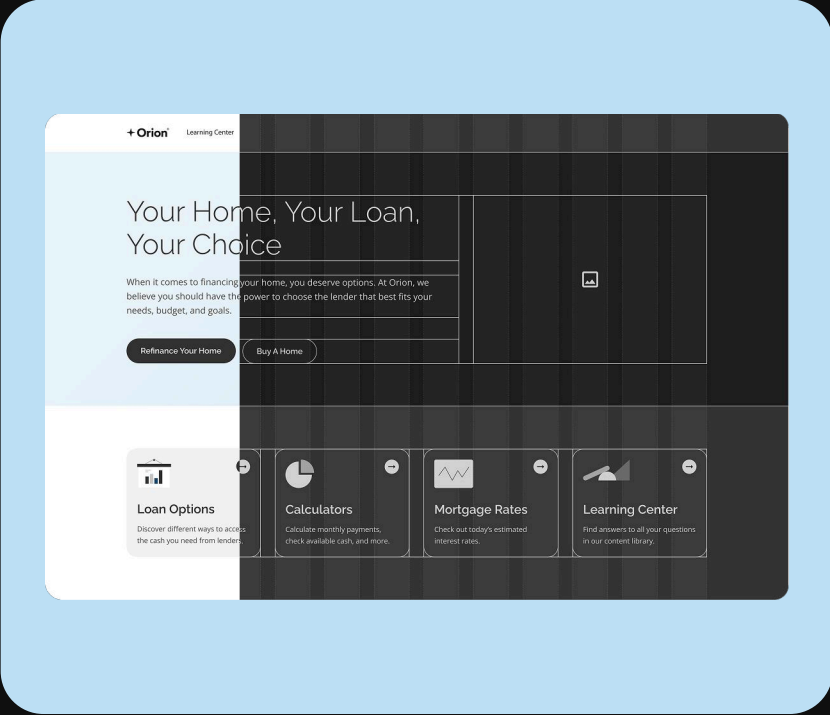

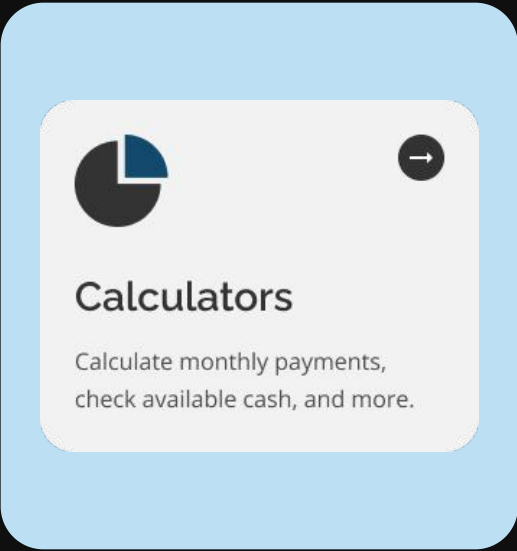

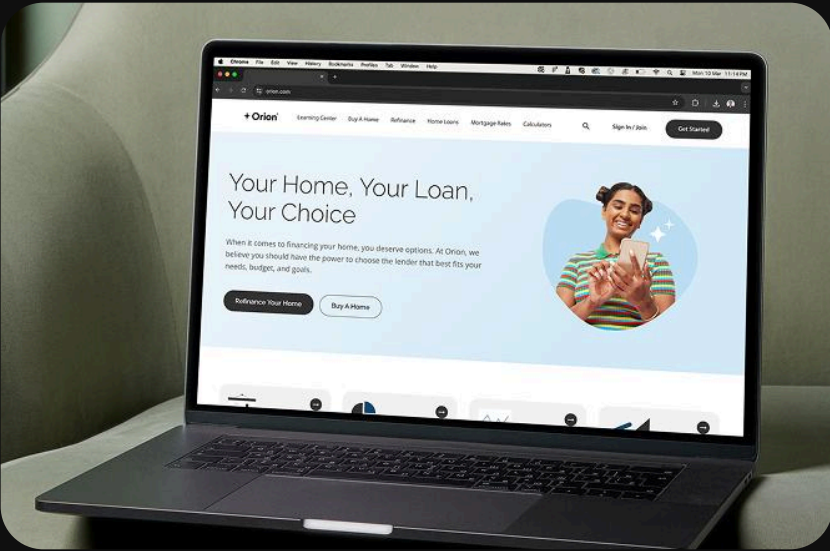

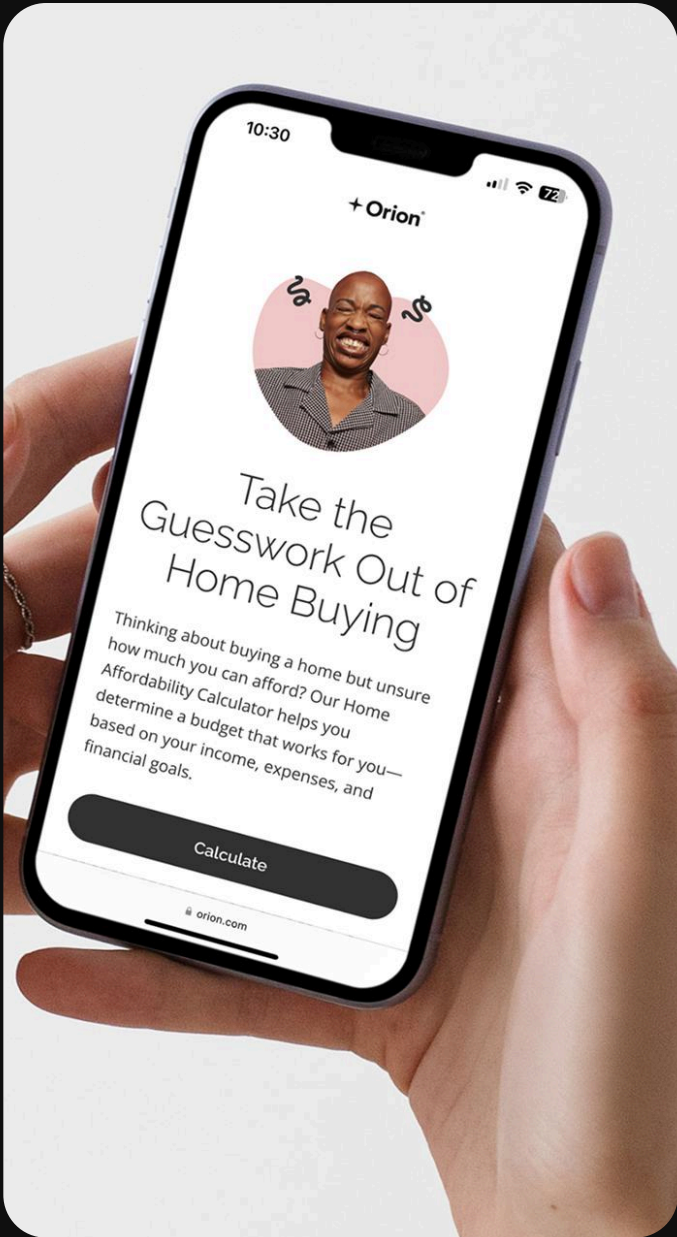

Conducted a full discovery and UX audit of the platform, assessing usability and the existing front-end architecture, including the absence of reusable component libraries. Led user research to identify critical pain points and inform a complete redesign of the platform's brand and UI. Designed and implemented a modular design system built to integrate seamlessly with a CMS, enabling scalable content creation, consistent UI patterns, and faster iteration across teams.

Impact

- Faster delivery enabled by a scalable, CMS-integrated design system
- Reduced user errors through consistent UI patterns
- Faster completion of key user tasks
- Improved user satisfaction and engagement
- Scalable foundation supporting long-term product growth

An entire business operation, now mobile

Business Need

NestBank needed to move their entire business operation to mobile so users could manage their loans independently. This would reduce pressure on customer service and allow the organisation to scale with growing demand across underserved communities.

Deliverables

Helped lead the end-to-end SDLC from discovery through delivery, conducting user research to identify operational gaps and key pain points that shaped a future-state mobile strategy. Defined Grameen's visual identity and designed the full mobile experience, validated through usability testing. Built a scalable design system from the ground up to ensure consistency, accessibility, and long-term growth.

Mindy Nies

Chief Product Officer & Head of Design

Joey is an exceptionally talented product designer whose strategic leadership on the QL brand refresh transformed our digital presence, and allowed us to modernize our website with a bold, user-centered vision. He played a pivotal role in evolving our UI kit into a mature, scalable design system that empowered team members across the design org to drive consistency in our UX/UI and improved our speed to ship designs to production. Joey's thoughtfulness and generosity, whether mentoring fellow designers or collaborating closely with Engineering and Product, made him a highly trusted partner and an invaluable member of our team. I would jump at the chance to work with him again in the future—he's a rarity in the design world.

Norma Caballero

Senior Product Manager

Joey exemplifies what it means to be a true consultant, he combines user empathy, strategic thinking, and delivery focus to ensure the client feels guided and supported throughout the process. His ability to challenge constructively and propose better approaches reinforces his credibility and strengthens our partnership.

Since we started working together, Joey looked for ways to align the team and foster collaboration. He is always available to discuss ideas, listens to different perspectives, and consistently keeps the user's needs in focus. Having him on the team is like always having a user present in our discussions: ensuring we deliver what is best for the client while staying within scope. He concentrates on essentials, drives results, and has been a key contributor from the beginning. His thoughtful approach has also helped build trust with the client, who sees him as a key contributor guiding us toward the right solutions.

Beyond his design expertise, Joey's technical skills are impressive. He experiments actively with AI and produces clickable prototypes with very quick turnaround times. These prototypes, which we had not initially planned due to time constraints, have been instrumental in gathering user feedback, conducting testing sessions, and sparking more productive conversations with developers.

In addition to his skills, Joey is a strong team player, he engages proactively with developers and testers, strengthening cross-functional collaboration and I would be glad to work with him again on any future project or initiative.

Shawna Johnson

Director of Product Management

Joey was by far one of the best designers I have ever worked with. He was always able to take my direction/ product requests and elevate the designs beyond what I had originally considered. His designs were dev smart and backed by his extensive experience in UX/UI understanding. He went above and beyond to explain design concepts and consideration when presenting his ideals to the team. I would work with Joey again anytime! Such a rockstar!
